

Identity, body image and womanhood in sexual minority women following gynaecological cancer

We are looking to speak to women who identify as lesbian, bisexual, gay or queer, who are over 18 years of age to participate in a study exploring the way gynaecological cancers can change or impact the way women view, see or think about themselves following treatment. We are interested in exploring personal thoughts and experiences regarding body image, fertility and how the term ‘survivor’ is used and it’s meaning to sexual minority women.

Gynaecological cancers include ovarian, uterine, cervical, vaginal and vulval cancers.

This study is being conducted as part of a PhD thesis. This study has no funding or sponsors.

You may receive a \$30 Coles gift card for you time.
